

Pregvit[®]

Capsule

Description

Pregvit is a special preparation of Iron, Folic acid, Vitamin B complex, and Vitamin C. Iron is presented in timed release form to escape gastric irritation. Each extended release capsule contains :

♦ Ferrous Sulphate BP	150 mg
♦ Folic acid BP	0.5 mg
♦ Thiamine Mononitrate (vitamin B ₁) BP	2 mg
♦ Riboflavin (vitamin B ₂) BP	2 mg
♦ Nicotinamide (vitamin B ₃) BP	10 mg
♦ Pyridoxine Hydrochloride (vitamin B ₆) BP	1 mg
♦ Ascorbic acid (vitamin C) BP	50 mg

Indications

Pregvit is indicated for the treatment and prophylaxis of Iron, Folic acid, Vitamin B complex and Vitamin C deficiency, or to meet extra need of these vitamins and minerals especially in pregnancy or when planning for pregnancy.

Dosage and Administration

Recommended adult dose is one capsule daily. In more severe deficiency states, 2 capsules a day may be required or as directed by the physician.

Contraindications

This product is contraindicated in patients with a known hypersensitivity to any of the ingredients. Iron therapy is contraindicated in haemochromatosis and haemosiderosis, and in patients receiving repeated blood transfusion or with anaemia not due to by iron deficiency. It should be given cautiously to patients taking Levodopa as one of the ingredients of Pregvit (Pyridoxine) reduces the effect of Levodopa.

Drug Interactions

Care should be taken when given to patients with Iron storage or Iron absorption disease. Iron form chelates with antacids and Tetracycline and absorption of all these may be impaired if taken concurrently.

Side Effects

Generally well tolerated. However, a few gastrointestinal disorders and allergic reactions may be occurred.

Use in Special Population

Pregnancy and lactation : It is recommended during pregnancy and lactation.
